

Adding features using software license Keys for TrangoLink GigaPlus

The GIGA Plus system has 3 different feature upgrades that are unlocked via a soft license key specifically created for each IDU. The installation of each key is a simple procedure that will not require a reboot and once the keys are entered, access to the feature unlocked is available immediately.

License Key Install Procedures:

1. Login into the IDU and enter into config mode
2. Once under config mode, enter the *license* command followed by the command modifier for the specific features as shown in the example below:

```
Trango System: TrangoLINK GigaLus Command Line Interface v1.0.0

(view)# config
Password:
(config)# license ? → This will yield the different modifiers to for this command
license_speed
license_tdm

(config)# license_speed 1 <Key> → where <Key> is the alphanumeric string that was provided by Trango Customer Service for speed 1.
```

The commands below show the require syntax, ordering code as well as the brief description of each command

Commands	Ordering Code	Description
license_speed 1 <Key>	GIGAPLUS-KEY-1	Enables total capacity of 200 Mbps full duplex
license_speed 2 <key>	GIGAPLUS-KEY-2	Enables max capacity of 375 Mbps full duplex
license_tdm <key>	GIGAPLUS-KEY-PDH	Enables 8 T1/E1 PDH ports on front panel
