

Adding features using software license Keys for TrangoLink ApexPlus

The ApexPlus system has two different feature upgrades that are unlocked via a soft license key specifically created for each IDU. The installation of each key is a simple procedure that will not require a reboot and once the keys are entered, access to the feature unlocked is available immediately.

License Key Install Procedures:

1. Login into the IDU and enter into config mode
2. Once under config mode, enter the *license* command followed by the command modifier for the specific features as shown in the example below:

```
Trango System: TrangoLINK ApexPlus Command Line Interface v1.1.2

(view)# config
Password: trango
(config)# license 1 <Key> → where <Key> is the alphanumeric string that was provided by Trango Customer Service for speed 1, up to 200 Mbps
(config)# license 2 <Key> → where <Key> is the alphanumeric string that was provided by Trango Customer Service for speed 2, up to 375 Mbps.
```

The commands below show the require syntax, ordering code as well as the brief description of each command

Commands	Ordering Code	Description
license 1 <Key>	ApexPLUS-KEY-1	Enables total capacity of 200 Mbps full duplex
license 2 <key>	ApexPLUS-KEY-2	Enables max capacity of 375 Mbps full duplex
